Chad Koslovsky

Dependable systems. Clear ownership.

Milliken, Colorado · chad@koslovsky.xyz

Information Technology Systems Administrator II | Poudre School District

Tailored portfolio: https://poudre.koslovsky.xyz

01 PROFILE

I have spent much of my career keeping shared systems useful when people depend on them. I would like to bring that care to the infrastructure behind Poudre's schools.

02 EXPERIENCE

Founder / Product Engineer / Systems Lead · Technomancy IT LLC | Present

Own client systems from the initial need through deployment and ongoing support. Implement Microsoft Entra ID and authenticated application integrations, with tenant-aware access boundaries across client and internal services.

Modernized Excell Services' legacy Windows Server, Active Directory, endpoints and VPN connectivity through the practice. Clients call me directly for IT support; I stay responsible for the systems after implementation.

Senior Systems Engineer / Datacenter Architect · Front Range Internet Inc. | 2015-2020

Ran the NOC, engineering escalations, monitoring and recovery verification for hosted infrastructure. After years at FRII, was trusted with sole systems-engineering responsibility for about a year during its ownership transition, while the NOC retained first-line coverage.

Migrated workloads from Hyper-V and VMware ESXi into Docker and Kubernetes, built tools for operators and hosting customers, and completed smaller server and firewall upgrades. Ran SOC 1 and SOC 2 audits and translated controls into usable procedures and evidence.

Systems / Software Engineer · Office Evolution | 2014-2015

Supported systems architecture across locations and client environments. Built centralized applications linking CRM, provisioning, onboarding and service operations so cross-department handoffs had an explicit workflow.

Worked with the CEO and CIO on operational needs and technical implementation, connecting business priorities to shared systems used across the organization.

Network & Systems Engineer · PlumChoice / Everon | 2012-2014

Engineered and supported networks, systems and endpoints for managed-service clients, including remote monitoring, antivirus services and on-call troubleshooting. Worked directly with business owners and end users.

Built diagnostic and support tooling around recurring problems, giving client support a repeatable path from symptoms to diagnosis and recovery.

Infrastructure and Systems Focal · IBM | 2010-2012

Served as infrastructure focal for shared enterprise environments supporting Best Buy, Amtrak and USPS systems. Coordinated changes, incidents and escalations across application, infrastructure, vendor and business teams.

Automated audit, backup and compliance workflows, and managed virtualization test labs and hosted desktop platforms. Combined hands-on systems work with the coordination needed to operate shared enterprise services.

03 SELECTED WORK

Keeping aging infrastructure operating · Front Range Internet Inc. · Employment | 2015–2020

Repaired server motherboards and parts that could not readily be replaced, keeping existing infrastructure operating while carrying out smaller server and firewall upgrades. Combined those repairs with recovery verification and operator procedures, working within the resources available rather than waiting for a full replacement.

Windows infrastructure modernization · Excell Services LLC · Technomancy client | Client engagement

Rebuilt legacy servers and employee computers, upgraded networks and implemented Windows Server, Active Directory and VPN access for corporate users. Helped launch a satellite location, bringing practical systems administration to a business that needed its infrastructure brought up to date.

Shared-service change & access coordination · IBM · Employment | 2010–2012

Operated shared enterprise infrastructure across application teams and customer environments, coordinating access, changes, incidents and escalations. Worked across infrastructure, application, vendor and business boundaries so technical operations had clear ownership beyond a single team.

Identity-aware document workflows · ProofMark · Completed client contribution | Client contribution completed

Designed a signing workflow spanning identity, document routing, verification and audit history. Explicit security-sensitive state and fallback paths connected the user-facing workflow to its data and integrations, a useful complement to my infrastructure and access-management work.

04 CAPABILITIES

Windows Server, Active Directory, VMware ESXi and Hyper-V · Microsoft 365, Azure and Entra ID administration and integration · Monitoring, recovery verification, NOC escalation and operational documentation · PowerShell, Bash, practical Python, Docker and Kubernetes · CompTIA A+ and Network+ (earned)
